

Flow limitation valve MBV for electrical control - closed without current

1303

Components

- 1: Main valve
- 2: Ball valve (A, B, C)
- 3: Filter
- 4: Orifice
- 5: Throttle check valve
- 6: Control valve
- 7: Differential pressure orifice plate
- 8: Optical position indicator (optional: Electrical position indicator, opening limiter)
- 9: Electric solenoid valve
- 10: Manometer with ball valve (A, B)
- B: DN 40 to DN 150: 22 mm
DN 200 to DN 250: 27 mm
DN 300 to DN 400: 29 mm
- X: 5 x DN line
- Y: 3 x DN line

Product information

- To calculate the dimensions of the valve please refer to the following information:
- Maximum and minimum inlet pressure (static and dynamic pressure ratios)
- Required outlet pressure after the orifice plate
- Required flow rate
- Voltage information for the solenoid valve
- Permissible loss of pressure incl. measuring orifice (usually 0.5 bar over the valve and orifice plate)
- Available line diameters and lengths
- Construction of the valve (straight or angle design)
- For the calculation basis, information on the loss of pressure and the characteristic values of the valve, please refer to the end of Chapter E.

Application

- To use in drinking water systems (other media after consultation)
- Limitation of the inflow from a pressure zone into a lower pressure zone
- Constantly maintaining a filter flow
- The supply to a secondary network necessitates a limitation of the flow, so as to not endanger, for example, the extinguishing reservoir of the primary network (in combination with a reduction in pressure).

Mode of operation

- The flow-control valve completely hydraulically ensures a pre-determined maximum flow, irrespective of any changes in the operating pressure. The nominal flow rate can be progressively varied up to $\pm 15\%$ via the control valve. The valve is started up by the solenoid valve (customer's control system). The valve is shut when the power is off.

Installation and assembly

- Shut-off valves should be fitted on both sides of the valve and a dirt trap should be installed on the inlet side of the valve. Depending on the installation situation, a mounting/dismounting adapter and an aeration and ventilation system should be provided.
- The orifice plate must be installed after the valve. It is recommended that the following measurements are taken into consideration:
- X = 5 x DN, distance between the valve and the orifice plate in a straight line
- Y = 3 x DN, distance after the orifice plate and the shut-off component, in a straight line
